Introduction NHS Healthcare Context Challenges Digital tools Where does design sit? Case Study: Prince Charles Hospital (Refurbishment) Case Study: Specialised Rehabilitation Hospital (Refurbishment)

Our design philosophy puts people at its centre. We approach every design with a creative, thoughtful, and fun process that allows the character and ideas of each project flourish in their own delightful way.

NHS Healthcare Context

NHS is challenged with:

- Long-term lack of investment
- Un-funded hospital programs
- RAAC failures
- Significant backlog maintenance

"The NHS is quite literally crumbling. I have visited hospitals where the roof has fallen in, pipes regularly leak and even freeze over in winter"

– Wes Streeting, secretary of state for health and social care, January 2025

NHS need is:

- > Urgent
- > Widespread
- Cannot be met with traditional approaches

First order of business for NHP:

- Secure the funding (wave 1)
- Establish relationships
- Create a realistic and deliverable timetable

5W's +1H: How...

- Who: 10 Contractors will be appointed
- Why: Urgent need
- What: 41 hospitals
- Where: Widespread
- When: Wave 1 by 2030

Biggest Hospital building program in a generation...

Benefits of standardisation:

Standardised Product/ Demand Streamlined Business Case/ certainty of pipeline Improves:

- Speed
- Safety
- Sustainability
- Quality

Challenges:

Capacity

Biggest hospital building programme in a generation New approach, multi-skilled, competent workforce

Skills

Tools & Methods

Digital & Data, Kit of Parts

Suitability

Complicated existing estates, variations in population needs

Inside-out design

Ward/Department

32 bed ward

Grid & Rooms 8.4 x 8.4 (or 5.4) 16

'Module'

8.4 x 8.4 (or 5.4) 16 bed cluster HTMs / HBNs

- Brick dims: 8437.5
- Controversial pod location.
- Grid not cross-sector
- Current module is 8 beds: larger 16-bed module reduces

flexibility.

• Ward sizes are clinically driven. Consider future variations in trust requirements Building Multiple configurations

• Configurations may be too prescriptive for some sites due to fixed ward length.

Kit of Parts Approach

HLM Architects

In the Industrialised Construction model, where does Design sit?

Photo: Lessons for Students in Architecture by Herman Hertzberger

"...every plan you make fails at first contact with the enemy and first execution...the value of making a plan is in getting everyone aligned in what they need to achieve...and enabling them the flexibility to adjust as things change..."

~Retired US Vice Admiral Kevin Donegan, Middle East Institute

MHCLG Digital Kit of Parts Research

Digital Assets:

Standardised specification templates for each part within the kit comprising:

- 1. Quality Principles Document
- 2. Data templates

Digital Toolkit:

1. Created from the digital assets in any software,

2. Embedded with the digital asset standardisation so that design information can be transferred from the supply chain to the designer and back.

Complementary Software:

Creates potential for new software and AI tools to be developed to assist the data transfer and design communication.
